6. Technology does not improve learning.
7. Can't afford tech.
8. Must be a techie.

### II. Magic....

### Podcasting <http://itunes.stanford.edu/>

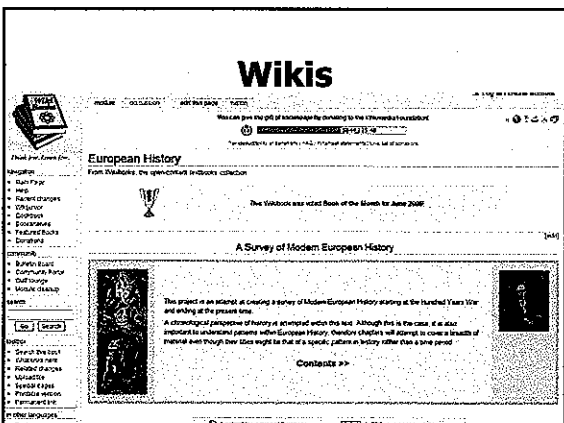

### Podcast Questions

1. Who has listened to a podcast?
2. Who listens to a certain podcast on a regular basis?
3. Who has created a podcast?
4. Who has created a vodcast?
5. Who thinks podcasting is simply more talking heads?

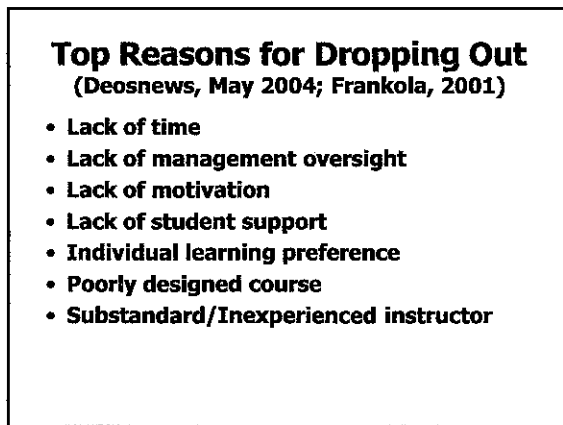

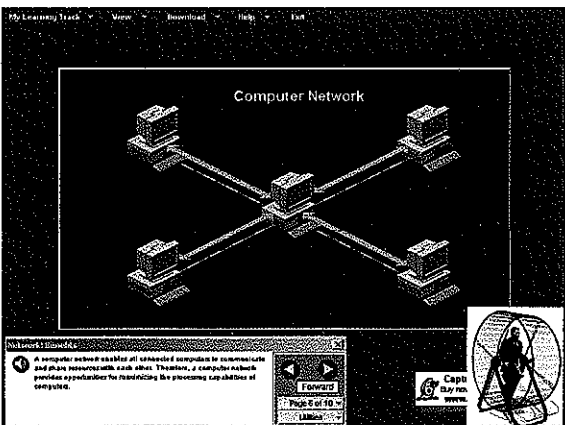

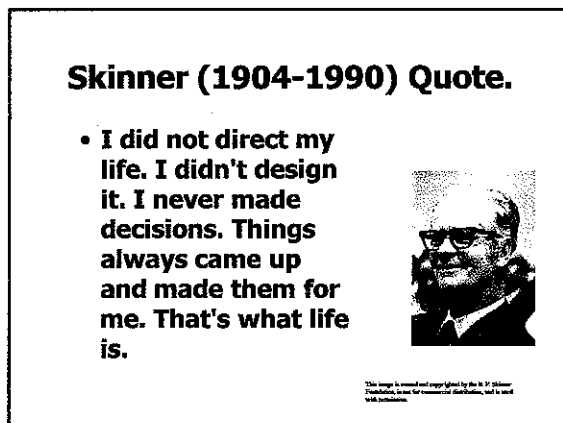

### Wikis

- ### Learner Control: Xer
- Xers expect a range of options, in terms of what they learn and how they learn it. They require autonomy and flexibility for their own learning. They demand a variety of instructional methods from which they can choose to learn, e.g., videotapes, self-paced modules, interactive CDs.
    - “Online gives me something to do when I’m bored with the professor.”
    - “I respect myself more as a self-teacher.”

### 2. Encouragement, Feedback, etc.: C. Thinking About the Readings (TARS) JIIT; Claude Cookman, IU, Photography Class

**Technology drives the medium**

This was Question 1 on TARS.

A major concern in the history of photography is often expressed with the somewhat phrase "technology is the real medium." That is, the evolution of technical aspects of photography—development in camera, lenses, film speed, sensitivity, reproduction—make new genres of photography possible and, to a lesser extent, dictate a smaller portion of the creative process of the system—how you period to that genre. From the earliest, through the technological developments that you think were watershed moments, describe three and then explain how they changed photography—meaning and language and/or photographic practice.

Response 1: The technical aspect of development that are important and changed photography are the invention of the flash and the light sensor. The flash bulb made night photography possible. It made it safe to take pictures straight on and photograph to make portrait lighting easier. The new flash bulb that we used by now.

Feedback: This student returned to us with the following comment: "I was a little puzzled because each of the questions involved your comment level to better become developed. I think you may have missed the point as it is about looking to change the accepted practice of photography by looking away from Photography and using light and angles to explore 'through' photography. I think in describing Photography, I may have been pedantic. For those together like us, but not in the future, my inclusion is more your answers." Thank you.

### 3. Curiosity, Fun: B. Virtual Field Trips

**Gas prices fuel rise in virtual field trips**  
As soaring costs make traditional travel impossible for many schools, educators are turning to the internet.

By Laura Davanny, Senior Editor, eSchool News

With virtual field trips, students can have a personal tour of Hawaii Volcanoes National Park.

As schools grapple with budget cuts and rising fuel costs, many districts are looking for ways to reduce or eliminate field trips, leaving students and teachers with a surprisingly attractive option—virtual field trips.

Virtual field trips typically involve students using video conferencing software or using a simple web browser to visit an online location, such as the web site of a national park or other site.

2. Start-wrapper with roles--same as #1 but include roles for debate (optimist, pessimist, devil's advocate).

### C. Alternative: Facilitator-Starter-Wrapper (Alexander, 2001)

Instead of starting discussion, student acts as moderator or questioner to push student thinking and give feedback

## 7. Interactive, Collaborative:
